

# Information Sheet

## Typical Costing for a Surgery Pod

**Surgery Pod** costs range from £4,200 for the basic Pod without any peripherals to around £9,000 for a fully complemented Pod with Arm-In Blood pressure monitor, LDX blood analyser and top of the range scales/height devices.

A typical Surgery Pod using the A&D TM-2655 Arm-In BP monitor costs £5,950 although some Practices substitute this device for the A&D UA-767PC Cuff monitor which reduces the overall cost to £4,825 plus VAT.

In all cases the Surgery Pod requires a network connection so it can communicate with the Patient Management System (PMS). If this is not available we can install a network point for £300 (subject to site survey)

### Single terminal Surgery Pod (typical installation with A&D TM-2655 Arm-In BP unit)
